Stifh Barragan

Software Architect & Engineer | Solutions Architecture and AI-First Systems

stifhbl.com · stifhlife@gmail.com · linkedin.com/in/stifhbl · github.com/S4WLAND

Professional Summary

Software engineer and architect with 6+ years taking systems from the first client conversation to production: requirements interpretation, domain and data modeling, API contract design, and the architecture and infrastructure decisions behind them. Continuous learner, with AI agents as part of the toolchain.

Professional Experience

VencejosLab Corrientes, Argentina (Hybrid)

Software Architect Feb 2026 - Present

- Interpret client operations in direct conversation and turn them into **requirements**, user stories with acceptance criteria and technical documentation the team and the client read the same way.
- Own **architecture and infrastructure decisions**: the simplest solution that carries the expected growth, matched to the requirement and the resources available, with environment parity and verified releases.
- Design **domain models** and both **relational and non-relational** schemas, and identify the core business logic and queries where optimization actually pays.
- Architect **multi-tenant** platforms serving many organizations from one deployment, with versioned **API contracts** segmented by consumer and access level and the **identity and access** design behind them.
- Design for response under load: **event-driven** asynchronous processing with queues and workers, **idempotent** operations and explicit handling of **race conditions**.
- Designed the agentic framework the studio governs its projects with: onboarding, stories, planning and documentation as artifacts an **AI agent** operates under scoped permissions.

Software Engineer Jul 2025 - Feb 2026

- Migrated **legacy systems** – .NET Framework, PHP and Java 8 – to layered services, redesigning the data model and the module boundaries without interrupting client operations.
- Designed relational schemas of 20+ tables with taxonomy trees and immutable transactional snapshots, with versioned migrations as the only path for schema change.

Independent Consultant | *Software Engineer* Remote • Jun 2021 - Jul 2025

- Designed and deployed a serverless healthcare application in Colombia, cutting patient data processing time by 20% and improving response times.
- Designed data models, service architectures and deployment topologies for clients in commerce, education and health, from requirements through production.

Textknow | *Software Developer* Bogotá, Colombia • May 2018 - Aug 2020

Selected Projects

Agentic SDLC framework (internal product): CLI framework standardizing how client projects are started, tracked and delivered: four separated layers, state derived from typed commits through CI, and per-layer instructions routing AI tools to the right context.

Education

Universidad Nacional de Colombia | *B.Eng. Computer and Systems Engineering* Bogotá, Colombia • 2020 - In progress

Research in distributed systems and parameter-efficient fine-tuning of foundation models (LoRA/PEFT).

Certifications

Software Design and Architecture Specialization, University of Alberta (2026)

Applied DevOps Engineering (IBM), Full-Stack JavaScript Developer (IBM)

Technical Skills

Competencies: Requirements Interpretation, Domain Modeling, Relational and Non-Relational Modeling, Query Optimization, API Contract Design, System Architecture, Infrastructure Design, Multi-Tenant Architecture, Domain-Driven Design (DDD), Clean Architecture, Microservices, Event-Driven Architecture, Idempotency, Concurrency, IAM, Legacy System Migration, Continuous Learning

Programming Languages: TypeScript, JavaScript, Python, Java

Technologies: Node.js, Fastify, NestJS, Spring Boot, .NET Core, Next.js, React, REST, OpenAPI, OAuth 2.0, OpenID Connect, JWT, PostgreSQL, MySQL, SQL Server, MongoDB, Redis, SQL, Jest, Playwright, AWS, Google Cloud, Azure, Docker, Kubernetes, GitHub Actions, Jenkins, Nginx, Traefik, Grafana, MCP, Git, Linux

Languages: Spanish (native), English (B2)
